RL7828 Tadpole Tape

CFP Tadpole Tapes are resilient gasketing tapes formed by folding specially designed cover materials over heat resistant cores and sewing or cementing the tail section to form the characteristic "tadpole" shape. The design provides effective sealing where limited bolt pressure and/or uneven mating surfaces are prevalent.

RL7828 tadpole tape uses a special wire inserted version of Flextra woven cloth (aramid/fiberglass) press cured on both sides with neoprene rubber. The cover material is folded over a flame resistant silicone sponge rubber core and stitched with a Kevlar sewing thread into a pedestal shape.

The highly resilient seal conforms to aircraft fireproof requirement (2,000°F for 15 minutes), and meets Lockheed-Martin Spec LS60225-1.

Pedestal shaped seals are available in custom sizes to your specifications. Typical applications include: aircraft compartments, oven and furnace doors, ducting access doors, dust and environmental control, hooded equipment, clean rooms, other vibration and thermal barriers, and crucible lids.

Kevlar is a trademark of DuPont.

Flextra is a trademark of Alpha Associates, Inc.
